

Eemits supplies R2 radios to global leader in access solutions to improve two-way communication at on-site factory

Assa Abloy got in touch requesting radios for their factory in Willenhall so staff could hear each other during essential tasks - helping to improve efficiency across the operation.

THE CHALLENGE

Assa Abloy is a global leader in access solutions, with its UK arm (Abloy UK) a leading expert in high quality door locking.

The challenge was to supply them with 12 suitable radios that would allow their staff to each other effectively during important touchpoints of their manufacturing process.

After an initial fact find, Eemits Communications recommended the Motorola R2 device, with no requirement for additional infrastructure.

THE SOLUTION

We installed Eemits ultra-smart digital two-way radio solution - TRBOCALL – a modular platform comprising the following:

HARDWARE

Assa Abloy chose 12:

Motorola R2 radio devices

The Benefits

Assa Abloy chose the Motorola R2 device for use between workers on the factory floor and yard workers (who load up shipments).

The Motorola R2 was the ideal solution as it has exceptional audio quality, with noise cancellation technology.

Plus, the R2 is built with a sleek and tough form factor, has a high-capacity battery, and an IP55 rating - making it suitable for a factory environment.

Dubbed the "ultimate workhorse", the R2 is engineered to minimise downtime with a simplified user experience, foolproof ergonomics and low-cost migration.

As Assa Abloy only needed a back-to-back radio solution, the added coverage capabilities of the R2 being a licenced radio (rather than a licence-free device), means they have a high performance solution without the added cost of infrastructure.

Purchasing the radios from Eemits means we look after the OFCOM licence approach for them. This allows them to get on with the task at hand without worrying about managing their radio licence.

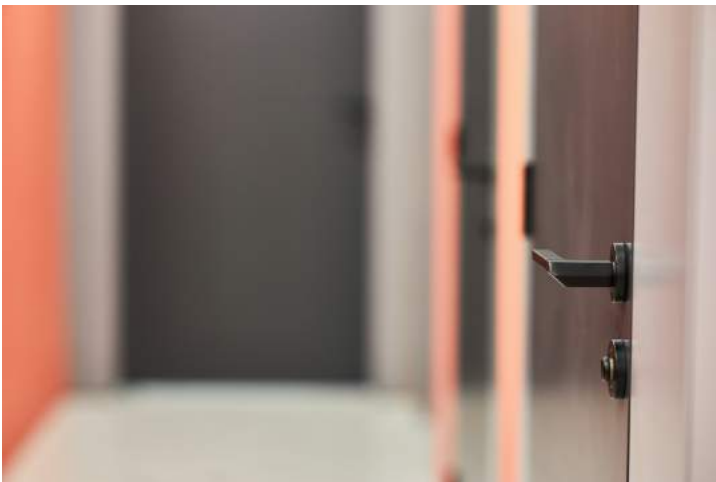

THE RESULTS

Assa Abloy now has brand new R2 radios at their main factory site in Wolverhampton.

Eemits Communications looks forward to supporting Assa Abloy with any future radio requirements.

Eemits innovative modular platform TRBOCALL - a unique combination of hardware, bespoke software applications and digital features - together create an ultra-smart two-way radio system. Combined with unrivalled wide area network coverage, our customers have the flexibility to build their own system with all, or a combination of infrastructure, hardware, software service wrap, features and accessories that suite their individual business needs.
